

Evolving and improving landing networks with EGNOS

Benoit Roturier - DSNA

EU Space Week Marseille

D S N A

Direction Générale de l'Aviation Civile

Ministère de la Transition écologique et solidaire

INTRODUCTION

- Satellite technology opportunities allow now ANSP and airports to complete/redesign approach and landing networks
 - System layer: GNSS
 - Application layer: PBN (Performance Based Navigation)
- Opportunities include reducing infrastructure costs, while maintaining and even improving airport accessibility and safety
- Consultation of airports and airspace users is required
 - Building a common understanding
- Assessing pro & con's of the different GNSS technologies is a key factor to implement the changes
 - ABAS
 - GBAS
 - SBAS (EGNOS in Europe)

Conventional Navigation networks

France

- **Instrument Landing System (ILS)**

- 23 owned ILS Cat III **no change**
- 98 DSNA owned ILS Cat I, **now down to a Minimal Operating Network (MON) of 49 DSNA owned ILS**

- **VHF Omni Range (VOR)**

- 96 DSNA owned VOR
- **Minimal Operating Network studies launched**

- **Non Directional Beacon (NDB)**

- 104 DSNA owned NDB
- **Minimal Operating Network studies launched**

ILS CAT I MON actual implementation

**About 5 M€ yearly savings
Contributes to the French
Landing Tax reduction program**

2018 : 225,50 €
2017 : 224,45 €
2016 : 227,1 €
2015 : 228,62 €
2014 : 233,23 €

DSNA

Conventional approaches lessons learned

- **Cat I level of performance is ideal for most airports**
 - Supports accessibility 95% or more of the time for French airports
 - Vertical guidance supports improving safety
 - Ideal target for PBN procedures and avionics in the future
 - NB: Near Cat I (i.e. SBAS APV I) is also meeting such objectives
- **Rationalizing ILS « quite easy »**
 - Depends on the density of the initial network
 - Availability of SBAS signal is a key asset to maintain equivalent accessibility
 - In this context, GBAS Cat I unfortunately not helpful due to ground stations cost and lack of user avionics for the smaller airports
 - European (GSA) avionics subvention plan was an important tool

PERFORMANCE BASED NAVIGATION (PBN) APPROACH MINIMA

- Typical performance of 2D/3D GNSS guided approaches

France PBN target:

LPV 250/Cat I means
airports accessibility
95% of the time
+ increased safety

PBN LANDING CHART

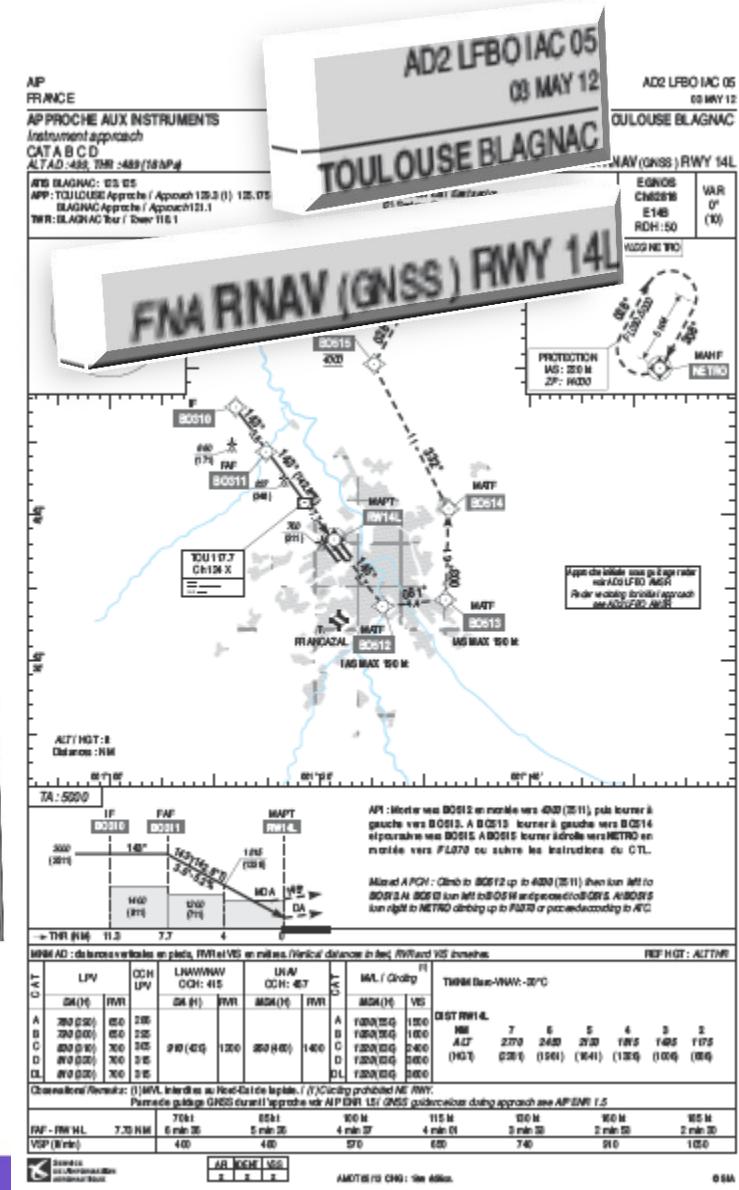

- France implements ICAO charting concept for PBN, down to LPV 250 ft or Cat I
 - Supports an easy introduction over airports
 - Manages smoothly different generation of avionics
 - Avionics equipment transparent to ATC

The diagram illustrates the relationship between EGNOS, SBAS, and minima requirements for GPS and ABAS+BaroVNAV. It shows two columns of requirements:

- GPS:** EGNOS, SBAS, and minima.
- ABAS+BaroVNAV:** ABAS and minima.

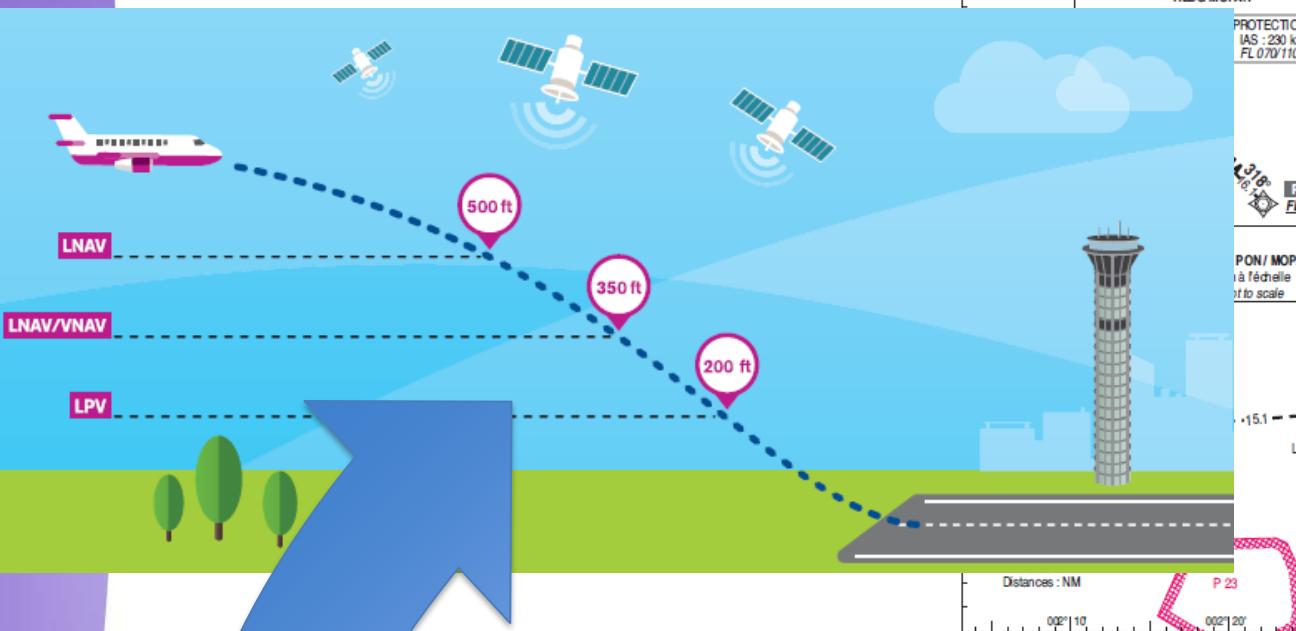

The word "GPS" is written vertically above the first column, and "ABAS" is written vertically above the second column. The word "minima" appears under both columns.

EGNOS IS

FREE!

MINISTÈRE
DE LA TRANSITION
ÉCOLOGIQUE
ET SOLIDAIRE

D S N A

Direction Générale de l'Aviation Civile

Ministère de la Transition écologique et solidaire

IN CONCLUSION, WHAT WE HAVE NOW IS:

MINISTÈRE
DE LA TRANSITION
ÉCOLOGIQUE
ET SOLIDAIRE

D S N A

Direction Générale de l'Aviation Civile

Ministère de la Transition écologique et solidaire

A COST EFFECTIVE BUT STILL PERFORMING NATIONAL APPROACH AND LANDING NETWORK:

- The network aims to:

“Cat I everywhere, everytime”

- This is achieved through a mixed infrastructure: **ILS and EGNOS**
 - When the ILS is out of service, or non existing over the runway in service, **equipped airlines benefit from an additional level of safety and airport accessibility thanks to EGNOS Cat I service**
- Thanks to the PBN approach chart concept, this network is also accessible to airspace users not equipped with EGNOS
 - In particular GPS and BaroVNAV ABAS equipped users
 - They use the same network, while ILS are maintained over the main airports
 - Acquisition of EGNOS avionics to access airports out of the ILS MON network is a case by case airspace user business case decision
